**Table of contents**

1. **About this document**  
   - Target audience
   - End users

2. **About the system**  
   2.1 **Indoor unit**
   2.2 **About the user interface**
   2.2.1 **Components: User interface**
   2.2.2 **Status: User interface LCD**
   2.2.3 **To operate the user interface**

3. **Before operation**
   3.1 To fix the user interface to the wall
   3.2 To insert the batteries
   3.3 To switch between Fahrenheit and Celsius
   3.4 To turn on the power supply

4. **Operation**
   4.1 **Operation range**
   4.2 When to use which feature
   4.3 **Operation mode and temperature setpoint**
     4.3.1 To start/stop operation mode and to set the temperature
     4.3.2 Airflow rate
     4.3.3 Airflow direction
     4.3.4 Comfort airflow operation
     4.3.5 Powerful operation
     4.3.6 Econo operation
     4.3.7 OFF/ON timer operation

5. **Energy saving and optimum operation**

6. **Maintenance and service**
   6.1 Overview: Maintenance and service
   6.2 To clean the indoor unit and user interface
   6.3 To clean the front panel
   6.4 To clean the air filters
   6.5 To clean the titanium apatite deodorizing filter and the silver particle filter (Ag-Ion filter)
   6.6 To replace the titanium apatite deodorizing filter and the silver particle filter (Ag-Ion filter)
   6.7 To close the front panel
   6.8 To take following items into account before a long idle period

7. **Troubleshooting**
   7.1 Symptoms that are NOT system malfunctions
     7.1.1 **Symptom:** A sound like water flowing is heard
     7.1.2 **Symptom:** A blowing sound is heard
     7.1.3 **Symptom:** A ticking sound is heard
     7.1.4 **Symptom:** A whistling sound is heard
     7.1.5 **Symptom:** A clicking sound during operation or idle time is heard
     7.1.6 **Symptom:** A clapping sound is heard
     7.1.7 **Symptom:** White mist comes out of a unit (Indoor unit)
     7.1.8 **Symptom:** The units can give off odours
     7.1.9 **Symptom:** The outdoor fan rotates while the air conditioner is not in operation
   7.2 Solving problems based on error codes

8. **Disposal**

---

**Notice:**

- This appliance is intended to be used by expert or trained users in shops, in light industry, and on farms, or for commercial and household use by lay persons.

**Document set:**

This document is part of a documentation set. The complete set consists of:

- **General safety precautions:**
  - Safety instructions that you must read before operating your system
  - Format: Paper (in the box of the indoor unit)

- **Operation manual:**
  - Quick guide for basic usage
  - Format: Paper (in the box of the indoor unit)

- **User reference guide:**
  - Detailed step-by-step instructions and background information for basic and advanced usage
  - Format: Digital files on http://www.daikineurope.com/support-
  and-manuals/product-information/

Latest revisions of the supplied documentation may be available on the regional Daikin website or via your installer.

The original documentation is written in English. All other languages are translations.
2.1.1 Indoor unit display

ON/OFF button
If the user interface is missing, you can use the ON/OFF button on the indoor unit to start/stop operation. When operation is started using this button, the following settings are used:

- Operation mode = Automatic
- Temperature setting = 25°C
- Airflow rate = Automatic

2.2 About the user interface

- Direct sunlight. Do NOT expose the user interface to direct sunlight.
- Dust. Dust on the signal transmitter or receiver will reduce sensitivity. Wipe off dust with a soft cloth.
- Fluorescent lights. Signal communication might be disabled if fluorescent lamps are in the room. In that case, contact your installer.
- Other appliances. If the user interface signals operate other appliances, move the other appliances, or contact your installer.
- Curtains. Make sure that the signal between the unit and the user interface is NOT blocked by curtains or other objects.

**NOTICE**

- Do NOT drop the user interface.
- Do NOT let the user interface get wet.
## 3 Before operation

### 3.1 To fix the user interface to the wall

1. Choose a place where the signals reach the unit.
2. Attach the holder with screws to the wall or a similar location.
3. Hang the user interface on the user interface holder.

### 3.2 To insert the batteries

The batteries will last for about 1 year.

1. Remove the back cover.
2. Insert both batteries at once.
3. Put the cover back.

### 3.3 To switch between Fahrenheit and Celsius

**Prerequisite:** Change this setting only when the temperature is displayed.

1. Press \(^{{\text{TEMP}}}\) and \(^{{\text{ON}}}\) simultaneously for about 5 seconds.

**Result:** The setting changes.

### 3.4 To turn on the power supply

1. Turn the circuit breaker on.

**Result:** The flap of the indoor unit will open and close to set the reference position.

## 4 Operation

### 4.1 Operation range

<table>
<thead>
<tr>
<th>Operation mode</th>
<th>Operation range</th>
</tr>
</thead>
</table>
| Cooling\(^{(a)}\) | • Outdoor temperature: –10~46°C DB
|                | • Indoor temperature: 18~32°C DB
|                | • Indoor humidity: ≤80% |
| Heating\(^{(b)}\) | • Outdoor temperature: –15~24°C DB
|                | • Indoor temperature: 10~30°C DB |
| Drying\(^{(a)}\) | • Outdoor temperature: –10~46°C DB
|                | • Indoor temperature: 18~32°C DB
|                | • Indoor humidity: ≤80% |

\(^{(a)}\) A safety device might stop the operation of the system if the unit runs outside its operation range.

\(^{(b)}\) Condensation and water dripping might occur if the unit runs outside its operation range.

### 4.2 When to use which feature

You can use the following table to determine which features to use:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Tasks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Basic features</td>
<td>To start/stop the system and to set the temperature:</td>
</tr>
<tr>
<td>(^{{\text{ON}}}) Operation modes and temperature</td>
<td>• Heat up or cool down a room.</td>
</tr>
<tr>
<td></td>
<td>• Blow air in a room without heating or cooling.</td>
</tr>
<tr>
<td></td>
<td>• Decrease the humidity in a room.</td>
</tr>
<tr>
<td></td>
<td>• In Automatic mode, automatically select an appropriate temperature and operation mode.</td>
</tr>
</tbody>
</table>
### 4.3 Operation mode and temperature setpoint

**When.** Adjust the system operation mode and set the temperature when you want to:
- Heat up or cool down a room
- Blow air in a room without heating or cooling
- Decrease the humidity in a room

**What.** The system operates differently, depending on the user selection.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Automatic</td>
<td>The system cools down or heats up a room to the temperature setpoint. It automatically switches between cooling and heating if necessary.</td>
</tr>
<tr>
<td>Drying</td>
<td>The system decreases the humidity in a room without changing the temperature.</td>
</tr>
<tr>
<td>Heating</td>
<td>The system heats up a room to the temperature setpoint.</td>
</tr>
<tr>
<td>Cooling</td>
<td>The system cools down a room to the temperature setpoint.</td>
</tr>
<tr>
<td>Fan</td>
<td>The system only controls the airflow (airflow rate and airflow direction). The system does NOT control the temperature.</td>
</tr>
</tbody>
</table>

**Additional info:**
- **Outside temperature.** The system's cooling or heating effect decreases when the outside temperature is too high or too low.
- **Defrost operation.** During heating operation, frost might occur on the outdoor unit and decrease the heating capacity. In that case, the system automatically switches to defrosting operation to remove the frost. During defrosting operation, hot air is NOT blown from the indoor unit.

#### 4.3.1 To start/stop operation mode and to set the temperature

<table>
<thead>
<tr>
<th>Mode</th>
<th>Press</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>Automatic operation</td>
<td>AUTO</td>
<td><img src="image" alt="Operation lamp lights up." /></td>
</tr>
<tr>
<td>Cooling operation</td>
<td>COOL</td>
<td></td>
</tr>
<tr>
<td>Drying operation</td>
<td>DRY</td>
<td></td>
</tr>
<tr>
<td>Heating operation</td>
<td>HEAT</td>
<td></td>
</tr>
<tr>
<td>Fan only operation</td>
<td>FANONLY</td>
<td></td>
</tr>
</tbody>
</table>

1. Start operation by pressing one of the following buttons.

2. Press ▼ or ▲ on the button one or more times to set the temperature. You CANNOT adjust the temperature in drying or fan only operation mode.

3. Press OFF to stop operation.

**Result:** The operation lamp goes off.

#### 4.3.2 Airflow rate

1. Press FAN to choose:

- ![5 airflow rate levels, from 'A' to 'B'.](image) 5 airflow rate levels, from ‘A’ to ‘B’.
- ![Automatic operation](image) Automatic operation
- ![Indoor unit quiet operation. When the airflow is set to ‘B’, the noise from the unit will be reduced.](image) Indoor unit quiet operation. When the airflow is set to ‘B’, the noise from the unit will be reduced.

**INFORMATION**
- If the unit reach the temperature setpoint in cooling, heating or automatic mode. Fan will stop operating.
- When using drying operation mode, you CANNOT adjust the airflow rate setting.

**To adjust the airflow rate**

1. Press FAN to change the airflow setting as follows:

#### 4.3.3 Airflow direction

**When.** Adjust the airflow direction as desired.

**What.** The system directs the airflow differently, depending on the user selection (swinging or fixed position). It does so by moving horizontal blades (flaps) or vertical blades (louvers).
### 4 Operation

<table>
<thead>
<tr>
<th>Setting</th>
<th>Airflow direction</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Vertical automatic swing" /></td>
<td>Moves up and down.</td>
</tr>
<tr>
<td><img src="image" alt="Horizontal automatic swing" /></td>
<td>Moves from side to side.</td>
</tr>
<tr>
<td><img src="image" alt="3-D airflow direction" /></td>
<td>Moves alternately up and down and from side to side</td>
</tr>
<tr>
<td><img src="image" alt="Stays in a fixed position" /></td>
<td>Stays in a fixed position.</td>
</tr>
</tbody>
</table>

**CAUTION**

ALWAYS use a user interface to adjust the position of the flaps and louvers. When the flaps and louvers are swinging and you move them forcibly by hand, the mechanism will break.

The movable range of the flap varies according to the operation mode. The flap will stop at the upper position when the airflow rate is changed to low during the up and down swing setting.

**To adjust the airflow direction**

1. To use auto swing, press .
   - Result: ![will appear on the LCD.](image)
   - Result: The flap (horizontal blade) will begin to swing.
2. To use fixed position, press when the flap reaches the desired position.
   - Result: ![disappears from the LCD.](image)

**To adjust the louvers (vertical blades)**

#### 4.3.4 Comfort airflow operation

This operation can be used in heating or cooling operation mode. It will provide a comfortable wind that will NOT come in direct contact with people. The system automatically sets the fixed airflow position upward in Cooling and downward in Heating operation mode.

<table>
<thead>
<tr>
<th>Cooling operation mode</th>
<th>Heating operation mode</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Cooling" /></td>
<td><img src="image" alt="Heating" /></td>
</tr>
</tbody>
</table>

**INFORMATION**

- Powerful and Comfort airflow operation CANNOT be used at the same time. The last selected function takes priority.
- If the vertical automatic swing is selected, Comfort airflow operation will be cancelled.

**To start/stop Comfort airflow operation**

1. Press to start.
   - Result: ![is displayed on the LCD.](image)
2. Press to stop.
   - Result: ![disappears from the LCD.](image)

#### 4.3.5 Powerful operation

This operation quickly maximizes the cooling/heating effect in any operation mode. You can get the maximum capacity.

**INFORMATION**

- Powerful operation CANNOT be used together with Econo and Comfort airflow operation. The last selected function takes priority.
- Powerful operation will NOT increase the capacity of the unit if it already operates at maximum capacity.

**To start/stop Powerful operation**

1. Press to start.
   - Result: ![is displayed on the LCD.](image) Powerful operation runs for 20 minutes; after that, operation returns to the previously set mode.
2. Press to stop.
   - Result: ![disappears from the LCD.](image)

**Note:** Powerful operation can be set only when the unit is running. If you press ![off](image), operation will be cancelled; ![off](image) disappears from the LCD.

#### 4.3.6 Econo operation

This is a function which enables efficient operation by limiting the maximum power consumption value. This function is useful for cases in which attention should be paid to ensure a circuit breaker will not trip when the product runs alongside other appliances.

**INFORMATION**

- Powerful and Econo operation CANNOT be used at the same time. The last selected function takes priority.
- Econo operation reduces power consumption of the outdoor unit by limiting the rotation speed of the compressor. If power consumption is already low, Econo operation will NOT further reduce power consumption.

**To start/stop Econo operation**

1. Press to start.
   - Result: ![is displayed on the LCD.](image)
2. Press to stop.
   - Result: ![disappears from the LCD.](image)

#### 4.3.7 OFF/ON timer operation

Timer functions are useful for automatically switching the air conditioner on/off at night or in the morning. You can also use OFF timer and ON timer in combination.

**INFORMATION**

Program the timer again in case of:
- A breaker has turned the unit off.
- A power failure.
- After replacing batteries in the user interface.

**To start/stop ON timer operation**

Use this feature if the unit is NOT operating and you want to start operation after a certain time.

1. Press ![on](image).
5 Energy saving and optimum operation

Result: 1 H R is displayed on the LCD and the timer lamp lights up.
2 Press  again if you want to change the time setting.

INFORMATION
Each time  is pressed, the time setting advances by 1 hour. The timer can be set between 1 to 12 hours.

Example: If  H R, is set when the unit is NOT operating, operation will start after 2 hours.
3 To cancel the setting, press  .
Result:  and the time setting disappear from the LCD and the timer lamp goes off.

To start/stop OFF timer operation
Use this feature if the unit is operating and you want to stop operation after a certain time.
1 Press  .
Result:  H R is displayed on the LCD and the timer lamp lights up.
2 Press  again if you want to change the time setting.

INFORMATION
Each time  is pressed, the time setting advances by 1 hour. The timer can be set between 1 to 12 hours.

Example: If  H R, is set when the unit is operating, operation will stop after 5 hours.
3 To cancel the setting, press  .
Result:  and the time setting disappear from the LCD and the timer lamp goes off.

INFORMATION
Night set mode
When the OFF timer is set, the air conditioner automatically adjusts the temperature setting (0.5°C up in cooling, 2.0°C down in heating) to prevent excessive cooling/heating and ensure a comfortable sleeping temperature.

To combine OFF timer and ON timer
1 To set the timers, refer to "To start/stop OFF timer operation" [7] and "To start/stop ON timer operation" [6].
Result:  and  are displayed on the LCD.

Example:
2 If  is set when the unit is operating.
Result: Operation stops in 1 hour and then starts 7 hours later.
3 If  is set when the unit is NOT operating.
Result: Operation starts in 2 hours and then stops 3 hours later.

INFORMATION
Even if the unit is turned OFF, it consumes electricity.
When the power turns back on after a power break, the previously selected mode will be resumed.

CAUTION
NEVER expose little children, plants or animals directly to the airflow.

WARNING
Do NOT place objects below the indoor and/or outdoor unit that may get wet. Otherwise condensation on the unit or refrigerant pipes, air filter dirt or drain blockage may cause dripping, and objects under the unit may get dirty or damaged.

WARNING
Do NOT place a flammable spray bottle near the air conditioner and do NOT use sprays near the unit. Doing so may result in a fire.

Observe the following precautions to ensure the system operates properly.
• Prevent direct sunlight from entering a room during cooling operation by using curtains or blinds.
• Make sure the area is well ventilated. Do NOT block any ventilation openings.
• Ventilate often. Extended use requires special attention to ventilation.
• Keep doors and windows closed. If the doors and windows remain open, air will flow out of your room causing a decrease in the cooling or heating effect.
• Be careful NOT to cool or heat too much. To save energy, keep the temperature setting at a moderate level.
• NEVER place objects near the air inlet or the air outlet of the unit. Doing so may cause a reduced heating/cooling effect or stop operation.
• Turn the breaker off when the unit is NOT used for longer periods of time. If the breaker is on, the unit consumes electricity. Before restarting the unit, turn the breaker on 6 hours before operation to ensure smooth running.
• Condensation may form if the humidity is above 80% or if the drain outlet gets blocked.
• Adjust the room temperature properly for a comfortable environment. Avoid excessive heating or cooling. Notice that it may take some time for the room temperature to reach the set temperature. Consider using the timer setting options.
• Adjust the air flow direction to avoid cool air from gathering on the floor or warm air against the ceiling. (Up during cooling or dry operation to the ceiling and down during heating operation.)
• Avoid direct air flow to room inhabitants.
• Operate the system within the recommended temperature range (26–28°C for cooling and 20–24°C for heating) to save energy.
6 Maintenance and service

6.1 Overview: Maintenance and service

The installer has to perform a yearly maintenance.

About the refrigerant

This product contains fluorinated greenhouse gases. Do NOT vent gases into the atmosphere.

Refrigerant type: R32

Global warming potential (GWP) value: 675

**NOTICE**

Applicable legislation on fluorinated greenhouse gases requires that the refrigerant charge of the unit is indicated both in weight and CO₂ equivalent.

**Formula to calculate the quantity in CO₂ equivalent tonnes:**

\[
\text{GWP value of the refrigerant} \times \text{total refrigerant charge [in kg]} / 1000
\]

Please contact your installer for more information.

**WARNING**

The refrigerant inside the unit is mildly flammable, but normally does NOT leak. If the refrigerant leaks in the room and comes in contact with fire from a burner, a heater, or a cooker, this may result in fire, or the formation of a harmful gas.

Turn off any combustible heating devices, ventilate the room, and contact the dealer where you purchased the unit.

Do NOT use the unit until a service person confirms that the part from which the refrigerant leaked has been repaired.

**WARNING**

- Do NOT pierce or burn refrigerant cycle parts.
- Do NOT use cleaning materials or means to accelerate the defrosting process other than those recommended by the manufacturer.
- Be aware that the refrigerant inside the system is odourless.

**WARNING**

The appliance shall be stored in a room without continuously operating ignition sources (example: open flames, an operating gas appliance or an operating electric heater).

**NOTICE**

Maintenance MUST be done by an authorized installer or service agent.

We recommend performing maintenance at least once a year. However, applicable legislation might require shorter maintenance intervals.

**DANGER: RISK OF ELECTROCUTION**

To clean the air conditioner or air filter, be sure to stop operation and turn all power supplies off. Otherwise, an electric shock and injury may result.

6.2 To clean the indoor unit and user interface

**WARNING**

To prevent electrical shocks or fire:
- Do NOT rinse the unit.
- Do NOT operate the unit with wet hands.
- Do NOT place any objects containing water on the unit.

**CAUTION**

After a long use, check the unit stand and fitting for damage. If damaged, the unit may fall and result in injury.

**CAUTION**

Do NOT touch the heat exchanger fins. These fins are sharp and could result in cutting injuries.

**WARNING**

Be careful with ladders when working in high places.

**NOTICE**

- Do NOT use gasoline, benzene, thinner polishing powder or liquid insecticide. **Possible consequence:** Discoloration and deformation.
- Do NOT use water or air of 40°C or higher. **Possible consequence:** Discoloration and deformation.
- Do NOT use polishing compounds.
- Do NOT use a scrubbing brush. **Possible consequence:** The surface finishing peels off.

1. Clean with a soft cloth. If it is difficult to remove stains, use water or a neutral detergent.

6.3 To clean the front panel

1. Clean the front panel with a soft cloth. If it is difficult to remove stains, use water or a neutral detergent.

6.4 To clean the air filters

1. Push the tab at the centre of each air filter, then pull it down.
2. Pull out the air filters.
6.5 To clean the titanium apatite deodorizing filter and the silver particle filter (Ag-ion filter)

**INFORMATION**
Clean the filter with water every 6 months.

1. Remove the titanium apatite deodorizing and silver particle filters from the tabs.

2. Remove the dust from the filter with a vacuum cleaner.

3. Soak the filter for 10 to 15 minutes in warm water. Do NOT remove the filter from the frame.

4. After washing, shake off remaining water and dry the filter in the shade. Do NOT wring out the filter when removing water.

**INFORMATION**
- If the dust does NOT come off easily, wash the air filters with a neutral detergent diluted in lukewarm water. Dry the air filters in the shade.
- Be sure to remove the titanium apatite deodorizing and silver particle filters.
- It is recommended to clean the air filters every 2 weeks.

6.6 To replace the titanium apatite deodorizing filter and the silver particle filter (Ag-ion filter)

**INFORMATION**
Replace the filter every 3 years.

1. Remove the tabs on the filter frame and replace the filter with a new one.

**INFORMATION**
- Do NOT throw away the filter frame, but use it again.
- Dispose of the old filter as non-flammable waste.

6.7 To close the front panel

1. Gently press the front panel at both sides and at the center until it clicks.
6.8 To take following items into account before a long idle period

1. Set the mode to fan only by pressing the ON/ONLY button to dry the inside of the unit.
2. After operation stops, turn the breaker off.
3. Clean the air filters and replace them in their original position.
4. Remove the batteries from the user interface.

**INFORMATION**

It is recommended to have periodic maintenance performed by a specialist. For specialist maintenance, contact your dealer. Maintenance costs shall be borne by the customer.

In certain operating conditions the inside of the unit may get dirty after several seasons of use. This results in poor performance.

7 Troubleshooting

If one of the following malfunctions occur, take the measures shown below and contact your dealer.

**WARNING**

Stop operation and shut off the power if anything unusual occurs (burning smells etc.).

Leaving the unit running under such circumstances may cause breakage, electric shock or fire. Contact your dealer.

The system MUST be repaired by a qualified service person.

<table>
<thead>
<tr>
<th>Malfunction</th>
<th>Measure</th>
</tr>
</thead>
<tbody>
<tr>
<td>If a safety device such as a fuse, a breaker or an earth leakage breaker frequently actuates or the ON/OFF switch does NOT properly work.</td>
<td>Turn OFF the main power switch.</td>
</tr>
<tr>
<td>If water leaks from the unit.</td>
<td>Stop the operation.</td>
</tr>
<tr>
<td>The operation switch does NOT work well.</td>
<td>Turn OFF the power supply.</td>
</tr>
<tr>
<td>If the user interface display indicates the unit number, the operation lamp flashes and the malfunction code appears.</td>
<td>Notify your installer and report the malfunction code.</td>
</tr>
</tbody>
</table>

If the system does NOT operate properly except for the above mentioned cases and none of the above mentioned malfunctions is evident, investigate the system in accordance with the following procedures.

**INFORMATION**

If after checking all above items, it is impossible to fix the problem yourself, contact your installer and state the symptoms, the complete model name of the unit (with manufacturing number if possible) and the installation date (possibly listed on the warranty card).

7.1 Symptoms that are NOT system malfunctions

The following symptoms are NOT system malfunctions:

7.1.1 Symptom: A sound like water flowing is heard

• This sound is caused by the refrigerant flowing in the unit.
• This sound may be generated when water is flowing away from the unit during cooling or drying operation.

7.1.2 Symptom: A blowing sound is heard

This sound is generated when the direction of the refrigerant flow is changed (e.g. when switching from cooling to heating).

7.1.3 Symptom: A ticking sound is heard

This sound is generated when the unit slightly expands or contracts with changes in temperature.

7.1.4 Symptom: A whistling sound is heard

This sound is generated by the refrigerant flowing during defrost operation.

7.1.5 Symptom: A clicking sound during operation or idle time is heard

This sound is generated when the refrigerant control valves or electrical parts operate.

7.1.6 Symptom: A clapping sound is heard

This sound is generated when an external device sucks air out of the room (e.g. exhaust fan, extractor hood) while the doors and windows in the room are closed. Open the doors or windows, or turn off the device.

7.1.7 Symptom: White mist comes out of a unit (Indoor unit)

7.1.8 Symptom: The units can give off odours

The unit can absorb the smell of rooms, furniture, cigarettes, etc., and then emit it again.

7.1.9 Symptom: The outdoor fan rotates while the air conditioner is not in operation

• After operation has stopped. The outdoor fan continues to rotate for another 30 seconds for system protection.
• While the air conditioner is not in operation. When the outdoor temperature is very high, the outdoor fan starts to rotate for system protection.

7.2 Solving problems based on error codes

If the unit runs into a problem, the user interface displays an error code. It is important to understand the problem and to take measures before resetting an error code. This should be done by a licensed installer or by your local dealer.

This chapter gives you an overview of all possible error codes and their descriptions as they appear on the user interface.

For detailed troubleshooting of each error, see the service manual.
8 Disposal

NOTICE

Do NOT try to dismantle the system yourself: dismantling of the system, treatment of the refrigerant, oil and other parts MUST comply with applicable legislation. Units MUST be treated at a specialised treatment facility for reuse, recycling and recovery.
